

Greige Fabric Inspection Machine

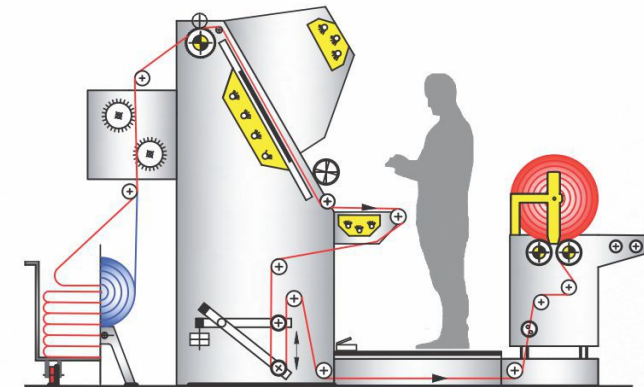

BIM-BRR ▶ Roll/Fold to Roll

*D*etection of anomalies and incorrect sizes for all types of fabric in Roll / Fold to Roll form is the prime function of this machine. A single machine operator can inspect, measure and roll the fabric, which saves manpower, space & time, resulting in increased production and cost savings. Also tensionless handling due to **Dancing Mechanism** ensures quality fabric with straight & presentable Rolls.

Brushing and beating system can be added in feed to clean the fabric and upgrade the quality of fabric. Also Horizontal table allows operator to mend the fabric with ease.
