

BSE ▶ Spreading + End Cutting

B-Tex spreading machine is highly recommended in garment & made-up industry. It consists of a pneumatic puller to grab the fabric and pulls to desired length. Heavy-duty German cutter auto-cuts the fabric, which finally spread over the last layer. Driven Un-winder, German slide, PLC panel and imported length counter ensures zero stretch and accurate length cutting.

BSE requires single operator to spread and cut the fabric with simple press operation. In Auto mode fabric roll can be feed and any number of layers can be set with desired length, which makes machine to work without operator. **BSE** saves 7-12 workers per shift and increases 3 times production.

Features:

Control Panel

Driven Un-winder

Auto Cutting

Electronic Counter

Fabric Puller

German Slides

Variable Speed

Italian Geared-Motor

Powder Coated

Wider Width
